OVERVIEW

Supply Voltage Range: 5V only, 3.3V to 5V
Operating Temperature: -40°C to 125°C
Max Common Mode: -7V to 12V
Package: SOIC

PERFORMANCE

Data Rate: 250Kbps, 500Kbps
EFT (IEC 61000-4-4): ±2kV
ESD Contact (IEC 61000-4-2): ±8kV
ESD HBM: ±15kV

FEATURES

- Meets or exceeds the requirements of the TIA/EIA-485A Standard
- Up to ±2kV Electrical Fast Transient protection
- Up to ±8kV ESD Contact
- Low power shutdown mode
- Hot swap support
- Extended operating temperature of -40°C to 125°C
- Advanced fail safe circuitry

BENEFITS

- ±2kV EFT tolerance protects systems from fast transients caused by relays and supply disconnects
- Both 5V only and 3.3V to 5V variations
- Slew-limited drivers for enhanced EMI immunity
- Industry standard pinout and footprint
- Advanced fail safe circuitry ensures a known Rx output when the bus is shorted, open, or idle with termination

APPLICATIONS

- Process automation
- Building automation
- Industrial sensors

Product Description

The MxL8310x/MxL8311x family of Half-Duplex RS-485 transceivers are specifically designed to support reliable communication in harsh industrial environments. The bus pins are designed to tolerate IEC electrical fast transients (EFT) and IEC electrostatic discharge (ESD).

Wide supply devices (3.3V to 5V) ensure reliable operation under a wide range of applications and in systems where the power supply may drop below 4.5V.

Low power shutdown mode can extend the life of batteries in applications such as industrial notebooks, sensors, and solar-powered applications, while hot swap ensures a deterministic logic state upon power-up.

The combination of integrated EFT and ESD protection, low slew-limiting drivers, and extended operating conditions, ensures this family of products is well suited for a broad range of applications.
